

LAST UPDATED 3/05/2020

Hi all!

All the Ominoise words are in this folder. Here are some things to know about the organization system:

- The words for each task are in their respective folders. I have versions with nouns and non-nouns as well as the combined list
- The “Combined” folder has the full list of words in case that’s of interest
- Misc. consists of things that you probably won’t need (the word corpuses, the initial pool of words sampled from, the words initially sampled before manually removing naughty words, etc., and the mean lexical characteristics of each task list)
- Rda files you also probably won’t need. However, if at some point you want do something with the word lists in R, you can use these files to get the data frame without running the entire script
